In the spring of 1973, the first edition of "The Elements of Style" was published. It has since become a classic guide to writing well, with millions of copies sold worldwide. The book emphasizes the importance of clarity, conciseness, and precision in writing.

The first edition was written by William Strunk Jr. and E.B. White. Strunk was a professor of English at the University of Rochester, and White was a writer and editor. Together, they wrote a guide for students to help them improve their writing skills.

In later editions, the book has been updated and expanded to include more contemporary examples and tips. The new edition is still widely used in schools and universities as a writing guide.

The book is known for its concise and straightforward advice, which includes rules for grammar, punctuation, and style. It is a valuable resource for anyone looking to improve their writing skills.
The N2R algorithm was used to train a neural network for experimental work.

The key from the neural network on the opposite page, 'A round-up,' was derived from experimental work on a neural network.
